

APK	ID	Source Signature	Source Category	Sink Signature	Sink Category	Description
backflash	1	android.telephony.TelephonyManager: java.lang.String getSimCountryIso()	LOCATION	java.io.OutputStreamWriter: void write(java.lang.String)	FILE	This malicious flow leaks the SIM country code into an OutputStream, writing to data that is later read by following flow.
backflash	2	android.content.Context: java.io.FileInputStream openFileInput(java.lang.String)	FILE	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	The second part of the above partial flow that leaks the country code into a URL that is then retrieved. Note: execute(...) internally calls doInBackground(...).
backflash	3	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious flow sends the telephone number of incoming calls via file upload to a remote server.
backflash	4	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	This malicious flow reads incoming number and appends it in a URL as parameter for a HTTP POST request to a remote server.
backflash	5	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	This malicious flow writes phone number to a file which will be posted to a remote server.
backflash	6	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	This malicious flow writes phone number to a file which will be posted to a remote server.
backflash	7	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	This malicious flow writes phone number to a file which will be posted to a remote server.
backflash	8	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	This malicious flow writes phone number to a file which will be posted to a remote server.
backflash	9	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	Unexpected flow
backflash	10	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	Unexpected flow
backflash	11	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	12	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	13	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	14	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	15	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	16	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.net.HttpURLConnection: java.io.OutputStream getOutputStream()	INTERNET	Unexpected flow
backflash	17	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	This malicious flow writes incoming phone number to a file which will be posted to a remote server.
backflash	18	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.OutputStreamWriter: void write(java.lang.String)	INTERNET	Unexpected flow
backflash	19	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious flow writes phone number to a file and the file content is posted to a remote server.
backflash	20	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious flow writes phone number to a file and the file content is posted to a remote server.
backflash	21	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious flow writes phone number to a file and the file content is posted to a remote server.
backflash	22	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious flow writes phone number to a file and the file content is posted to a remote server.
backflash	23	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	Unexpected flow
backflash	24	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	CONTACT	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	Unexpected flow
beita_com_beita_c ontact	1	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	javax.mail.Transport: void sendMessage(javax.mail.Message,javax.mail.Address[])	SMS	This malicious flow leaks contact data via email.
beita_com_beita_c ontact	2	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	java.io.BufferedWriter: void write(java.lang.String)	FILE	This malicious partial flow leaks contact data into a file (that is later uploaded).
beita_com_beita_c ontact	3	java.io.FileInputStream: void <init	FILE	java.io.DataOutputStream: void write(byte[],int,int)	INTERNET	This malicious partial flow uploads the file containing contact data to a remote server via HTTP POST request.
cajino_baidu	1	java.io.File: java.io.File[] listFiles()	FILE	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	This malicious flow reads photos and uploads them to a remote server via HTTP request. This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'photo'.
cajino_baidu	2	android.database.Cursor: java.lang.String getString(int)	DATABASE	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads contacts and saves them to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'contact'.
cajino_baidu	3	android.database.Cursor: java.lang.String getString(int)	DATABASE	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads call log and saves them to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'call_log'.
cajino_baidu	4	android.database.Cursor: java.lang.String getString(int)	DATABASE	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads sms messages and saves them to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'upload_message'.
cajino_baidu	5	android.location.LocationManager: android.location.Location getLastKnownLocation(java.lang.String)	LOCATION	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads location information and saves it to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'location'.
cajino_baidu	6	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads device id and saves it to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'phone'.
cajino_baidu	7	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	This malicious flow reads device id and uploads it to a remote server via HTTP request. This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'phone'.
cajino_baidu	8	java.io.File: java.io.File[] listFiles()	FILE	java.io.FileWriter: void write(java.lang.String)	FILE	This malicious flow reads file list and saves it to a file. This file will be later uploaded to a remote server (not a part of this flow). This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'list_file'.
cajino_baidu	9	java.io.File: void <init	FILE	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	This malicious flow uploads files. This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'upload_file'.
cajino_baidu	10	java.io.File: void <init	FILE	java.io.File: boolean delete()	CRITICAL FUNCTION	This malicious flow delete file. This malicious behavior will be triggered, when then PushMessageReceiver (a BroadcastReceiver) receives a command which contains the string 'delete_file'.
cajino_baidu	11	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	Unexpected flow The device id is only used as folder name.
cajino_baidu	12	java.io.File: void <init	FILE	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	This malicious flow uploads files to a remote server.
cajino_baidu	13	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	Unexpected flow The device id is only used as folder name.
cajino_baidu	14	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	com.baidu.inf.iis.bcs.BaiduBCS: com.baidu.inf.iis.bcs.response.BaiduBCSResponse putObject(com.baidu.inf.iis.bcs.request.PutObjectRequest)	INTERNET	Unexpected flow The device id is only used as folder name.
cajino_baidu	15	java.io.File: void <init	FILE	java.io.File: boolean delete()	CRITICAL FUNCTION	This malicious flow deletes files to cover up the malicious behaviors.
chat_hook	1	android.content.Context: java.io.FileInputStream openFileInput(java.lang.String)	FILE	java.io.DataOutputStream: void writeBytes(java.lang.String) org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	COMMAND EXECUTION	This malicious flow reads mount data to construct a command and execute it.
chat_hook	2	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious partial flow reads chat history and sends it to a remote server per an HTTP POST request.
chat_hook	3	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs device id.
chat_hook	4	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs chat history.

chat_hook	5	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs last message time in chat history.
chat_hook	6	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs chat history.
chat_hook	7	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs imei.
chat_hook	8	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs chat history.
chat_hook	9	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs lat message time and with whom.
chat_hook	10	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs imei.
chat_hook	11	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow is an implicit flow, since reaching sink depends on the data from source.
chat_hook	12	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	This malicious flow logs package information
chat_hook	13	android.content.Intent: java.lang.String getStringExtra(java.lang.String)	OTHER DATA	android.util.Log: int i(java.lang.String,java.lang.String)	LOG	Unexpected flow
chulia	1	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks the recipient or sender of an sms text message and posts it to an HTTP Server
chulia	2	android.location.Location: double getLongitude()	LOCATION	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks the location of the android device and posts it to an HTTP Server
chulia	3	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks contacts and posts it to an HTTP server.
chulia	4	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks phone number to a remote server. It reads first read the phone number in AlarmService class, later puts this information into a intent and starts a BroadcastReceiver sendReceiver.
death_ring_material_flow	1	android.telephony.gsm.SmsMessage: java.lang.String getDisplayMessageBody()	SMS	android.telephony.gsm.SmsManager: void sendTextMessage(java.lang.String,java.lang. String,android.app.PendingIntent,android.app.PendingIntent)	SMS	This malicious flow reads SMS content to fake text message for fishing.
dsencrypt_samp	1	android.content.res.AssetManager: java.io.InputStream open(java.lang.String)	FILE	java.lang.reflect.Method: java.lang.Object invoke(java.lang.Object,java.lang.Object[])	CRITICAL FUNCTION	This malicious flow reads an encrypted zip file from asset folder, decrypts it and extracts class.dex which contains malicious code. The malicious code is called via reflection.
expresgam	1	android.telephony.TelephonyManager: java.lang.String getLine1Number()	UNIQUE IDENTIFIER	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks the telephone number to a remote server.
expresgam	2	android.database.Cursor managedQuery(android.net.Uri,java.lang.String[], java.lang.String,java.lang.String[],java.lang.String)	DATABASE	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks contact data to a remote server.
fakeappstore	1	android.content.ContentResolver: android.database.Cursor query(android.net.Uri,java.lang.String[],java.lang. String,java.lang.String[],java.lang.String)	DATABASE	android.telephony.SmsManager: void sendTextMessage(java.lang.String,java.lang. String,android.app.PendingIntent,android.app.PendingIntent)	SMS	This malicious flow reads contacts from the device and spams them with SMS.
fakeappstore	2	org.apache.http.HttpEntity: java.io.InputStream getContent()	INTERNET	android.telephony.SmsManager: void sendTextMessage(java.lang.String,java.lang. String,android.app.PendingIntent,android.app.PendingIntent)	SMS	This malicious flow reads a message from an HTTP Server and sends a SMS to the retrieved numbers (command and control).
fakeappstore	3	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	org.apache.http.client.HttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow leaks the device id to an HTTP Server.
fakebank_android_samp	1	com.example.bankmanager.BankActivity: android.view.View findViewById(int)	ACCOUNT	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious ICC flow crosses 4 different activities: BankActivity, BankNumActivity, BankScardActivity and BankEndActivity. It starts from reading bank account number from user input in BankActivity; when the user performs a click on a button, the BankNumActivity is started; the BankScardActivity and BankEndActivity are also started by clicking on a button. In the first three activities, bank information such as account number, passwords and TAN number are stored into the static fields of the class BankInfo. There are input validations for user inputs to make sure that only valid bank information is collected. In the last activity, all collected information will be read from BankInfo and written to a List. This list will be sent to a remote server per an HTTP POST request.
fakebank_android_samp	2	android.telephony.TelephonyManager: java.lang.String getSimSerialNumber()	UNIQUE IDENTIFIER	java.net.URLURLConnection: java.io.InputStream getInputStream()	INTERNET	This malicious flow starts by reading the serial number of the SIM card, then writes to a List. This list will be sent to a remote server per an HTTP POST request. This malicious now starts by reading SMS message, then writes to a BasicNameValuePair object, then a HashMap. The hashmap will be sent to a remote server per an HTTP POST request when a Thread created by the class smsReceiver runs.
fakebank_android_samp	3	android.telephony.TelephonyManager: java.lang.String getSimSerialNumber()	UNIQUE IDENTIFIER	org.apache.http.client.HttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow starts by reading the serial number of the SIM card, then writes to a List. This list will be sent to a remote server per an HTTP POST request. This malicious now starts by reading SMS message, then writes to a BasicNameValuePair object, then a HashMap. The hashmap will be sent to a remote server per an HTTP POST request when a Thread created by the class smsReceiver runs.
fakebank_android_samp	4	android.telephony.SmsMessage: java.lang.String getDisplayMessageBody()	SMS	org.apache.http.client.HttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow starts by reading the serial number of the SIM card, then writes to a List. This list will be sent to a remote server per an HTTP POST request. This malicious now starts by reading SMS message, then writes to a BasicNameValuePair object, then a HashMap. The hashmap will be sent to a remote server per an HTTP POST request when a Thread created by the class smsReceiver runs.
fakebank_android_samp	5	java.io.File: void <init> android.telephony.SmsMessage: android.telephony.SmsMessage createFromPdu(byte[])	FILE	com.example.service.InstallService: void startActivity(android.content.Intent)	ICC	This malicious flow installs an apk from sdcard.
fakedaun	1	android.telephony.SmsMessage: android.telephony.SmsMessage createFromPdu(byte[])	SMS	org.apache.http.client.HttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads a received SMS and uploads it to an HTTP Server.
fakedaun	2	android.telephony.TelephonyManager: java.lang.String getSimSerialNumber()	UNIQUE IDENTIFIER	org.apache.http.client.HttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads the IMEI and uploads it to an HTTP Server.
fakemart	1	android.telephony.gsm.SmsMessage: android.telephony.gsm.SmsMessage createFromPdu(byte[])	SMS	java.net.URLConnection: java.io.InputStream getInputStream()	INTERNET	This malicious flow reads incoming SMSs and posts them to a URL.
fakemart	2	android.telephony.gsm.SmsMessage: android.telephony.gsm.SmsMessage createFromPdu(byte[])	SMS	java.net.URLConnection: java.io.InputStream getInputStream()	INTERNET	This malicious flow reads incoming SMSs and posts them to a URL.
fakeplay	1	android.telephony.TelephonyManager: java.lang.String getNetworkOperatorName()	NETWORK	java.io.OutputStream: void write(byte[],int,int)	EMAIL	This malicious flow leaks telephony network information via email.
fakeplay	2	android.telephony.TelephonyManager: java.lang.String getLine1Number()	UNIQUE IDENTIFIER	java.io.OutputStream: void write(byte[],int,int)	EMAIL	This malicious flow leaks telephone number via email.
faketaobao	1	android.widget.EditText: android.text.Editable getText()	ACCOUNT	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads user given taobao password and sends to a remote server.
faketaobao	2	android.widget.EditText: android.text.Editable getText()	ACCOUNT	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads user given taobao username and sends to a remote server.
faketaobao	3	android.widget.EditText: android.text.Editable getText()	ACCOUNT	org.apache.http.impl.client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads user's ID and sends it to a remote server.
faketaobao	4	android.widget.EditText: android.text.Editable getText()	ACCOUNT	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flows reads user given password and sends to a remote server.
godwon_samp	1	android.telephony.TelephonyManager: java.lang.String getLine1Number()	UNIQUE IDENTIFIER	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads the phone number and puts it into a ArrayList. This list is sent to a remote server via a HTTP Post request.
godwon_samp	2	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads the device Id when the phone number is empty. This device Id is stored in a ArrayList. This list is sent to a remote server via a HTTP Post request.
godwon_samp	3	android.content.Intent: java.io.Serializable getSerializableExtra(java.lang.String)	SMS	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow exists in the onReceive callback method of a BroadcastReceiver, it reads SMS messages to array, appends all messages to a string, stores it into a List and sends the list to a remote server via a HTTP POST request.
godwon_samp	4	android.content.Intent: java.io.Serializable getSerializableExtra(java.lang.String)	SMS	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow exists in the onReceive callback method of a BroadcastReceiver, it reads SMS messages to array, writes the sender's address into a private field, stores it into a List and sends the list to a remote server via a HTTP POST request.
godwon_samp	5	android.telephony.TelephonyManager: java.lang.String getLine1Number()	UNIQUE IDENTIFIER	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads the phone number and sends it to a remote server via a HTTP Post request.
godwon_samp	6	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	org.apache.http.impl client.DefaultHttpClient: org.apache.http.HttpResponse execute(org.apache.http.client.methods.HttpUriRequest)	INTERNET	This malicious flow reads device id when the phone number is empty, and it send the device id to a remote server via a HTTP Post request.

hummingbad_android_samp	1	android.database.Cursor: java.lang.String getString(int)	DATABASE	android.database.sqlite.SQLiteDatabase: long insert(java.lang.String,java.lang.String,android.content.ContentValues)	DATABASE	This malicious ICC flow crosses one activity and two services. It starts by reading advertisement information from data base into a JSONObject, when the user performs a click, new advertisements will be downloaded and saved into data base.
hummingbad_android_samp	2	android.database.Cursor: java.lang.String getString(int) android.telephony.TelephonyManager: java.lang.String getDeviceId()	DATABASE	android.database.sqlite.SQLiteDatabase: int update(java.lang.String,android.content.ContentValues,java.lang.String,java.lang.String[]) java.util.concurrent.ThreadPoolExecutor: java.util.concurrent.Future submit(java.lang.Runnable)	DATABASE	This malicious ICC flow crosses one activity and two services. It starts by reading advertisement information from data base into a JSONObject, when the user performs a click, new advertisements will be downloaded and updated in the data base.
jollyserv	1		UNIQUE IDENTIFIER		INTERNET	The malicious flow saves the phone's device ID in a public static field and leaks the device ID into an HTTP request.
overlaylocker2_android_samp	1	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	android.webkit.WebView: void addJavaScriptInterface(java.lang.Object,java.lang.String)	CRITICAL FUNCTION	This malicious flow reads the device id and uses it as the return value of the method imei() of the class MeSetting. An object of MeSetting is injected into the WebView by addJavaScriptInterface. The method imei() can be invoked via JavaScript code.
overlaylocker2_android_samp	2	android.telephony.TelephonyManager: java.lang.String getDeviceId()	UNIQUE IDENTIFIER	android.webkit.WebView: void addJavaScriptInterface(java.lang.Object,java.lang.String)	CRITICAL FUNCTION	This malicious flow reads the device id and stores it as a field of an TelephonyInfo object. This information will be used as the return value of the method dualsim() of the class MeSystem. An object of MeSystem is injected into the WebView by addJavaScriptInterface. The method dualsim() can be invoked via JavaScript code.
overlaylocker2_android_samp	3	java.lang.Class: java.lang.reflect.Method getDeclaredMethod(java.lang.String,java.lang.Class[])	REFLECTION	java.lang.reflect.Method: java.lang.Object invoke(java.lang.Object,java.lang.Object[])	CRITICAL FUNCTION	This malicious flow uses Java Reflection to execute code which gets the service for a selected sim card.
overlaylocker2_android_samp	4	java.lang.Class: java.lang.reflect.Method getDeclaredMethod(java.lang.String,java.lang.Class[])	REFLECTION	java.lang.reflect.Method: java.lang.Object invoke(java.lang.Object,java.lang.Object[])	CRITICAL FUNCTION	This malicious flow uses Java Reflection to execute code which sends SMS messages.
overlaylocker2_android_samp	5	java.io.FileInputStream: void <init	FILE	java.io.DataOutputStream: void flush()	INTERNET	This malicious flow reads file and sends the file to a remote server via an HTTP POST request.
overlaylocker2_android_samp	6	java.io.FileInputStream: void <init	FILE	android.webkit.WebView: void addJavaScriptInterface(java.lang.Object,java.lang.String)	CRITICAL FUNCTION	This malicious flow reads file from a given path and uses it as the return value of the method read() of the class MeFile. An object of MeFile is injected into the WebView by addJavaScriptInterface. The method read() can be invoked via JavaScript code.
overlaylocker2_android_samp	7	android.telephony.SmsMessage: createFromPdu(byte[])	SMS	android.content.Context: android.content.ComponentName startService(android.content.Intent)	ICC	This malicious flow monitors incoming SMSs.
